December 19, 2001

Dear Search Committee:

I am a member on Kamil Sarac's thesis committee. My interaction with Kamil is limited to reviewing his thesis and examing him during his defense.

Kamil's thesis work is on multicast monitoring. Being able to monitor multicast traffic is important for understanding traffic patterns so that effective network protocols and management tools can be devised. Kamil's work stops at data collection. I believe real interesting work starts after data have been collected. Once Kamil can further his research in developing effective protocols and network management tools to tackle the problems that he has identified, his publications should be more competitive in top-tier conferences and journals.

Kamil is a very pleasant person to work with. His personality and good communication skills make him a very qualified teaching faculty. If teaching will be his primary responsibility in your institution, Kamil has my enthusiastic support. A typical Stanford PhD student seeking for an academical position in a top-tier institution typically has at least two papers accepted by top-tier conferences at this stage. I believe that Kamil is at least a couple of years from meeting that standard, and I believe that he has good potential to make it there.

Sincerely,

Edward Chang, Stanford EE Phd, 1999
